SUMMARY

- SDE-2 with 2 years building production full-stack systems in Python, FastAPI and React. Currently designing LLM multi-agent and RAG pipelines that automate a healthcare claims lifecycle end to end, owning features from database schema through API to deployed UI.

EXPERIENCE

StackPro <i>Software Development Engineer II</i> <i>Software Development Engineer I</i> <i>Software Development Engineer Intern</i>	Bangalore, India <i>Jun 2026 – Present</i> <i>Jun 2025 – May 2026</i> <i>Sep 2024 – May 2025</i>
---	---

- DentalX — AI Claims Automation Platform***Feb 2026 – Present*
- Owned the end-to-end rebuild of a healthcare claims platform: migrated a legacy Laravel backend to async FastAPI, built the React frontend, and deployed on GCP Cloud Run and Vertex AI.
 - Designed an LLM multi-agent system automating the claim lifecycle across five stages: validation, auto-correction, submission, manual-review routing and patient outreach.
 - Built a RAG decision engine on Vertex AI Search reading payer policy documents to drive automated claim adjudication.
 - Implemented fault-tolerant async orchestration across three external systems: BigQuery, FHIR APIs and third-party payer services.
 - Shipped a voice outreach agent on Twilio and ElevenLabs for automated patient payment follow-ups.

- CyborgIntell — ML Pipeline Configurator & AR Application***Aug 2025 – Jan 2026*
- Led development of a platform converting ML pipelines into deployable applications with lifecycle tracking.
 - Built multi-step workflow UIs visualising pipeline construction, build status and deployment metrics.
 - Implemented secure cross-application messaging between micro-frontends via `postMessage`.

- SaiShiko — Survey & Analytics Platform***May 2025 – Aug 2025*
- Built a full-stack survey and analytics platform on React and Django REST Framework.
 - Added role-based authentication and moved report generation off the request path with Celery workers.

- CaseX — Crime Reporting Platform***Feb 2025 – May 2025*
- Built a guided crime-reporting flow with chat-based intake, geolocation incident mapping and validated evidence upload.

- CyborgIntell — MRM, MLFlux, ODA & Loan Collection***Sep 2024 – Jan 2025*
- Extended React Flow workflow builders with custom node types and dynamic interactions.
 - Built component libraries and dashboards used across four enterprise modules, cutting render cost with lazy loading and memoisation.

PROJECTS

- Bharat Briefs — AI News Aggregator** — *React Native, FastAPI, LLM APIs**Live on Google Play*
- Built an AI news aggregator ingesting articles from multiple sources into three-point summaries.
 - Implemented an LLM summarisation pipeline producing multilingual digests from long-form articles.
 - Added categorised feeds, article discussions and a trending system driven by engagement signals.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, Java, SQL
Backend & Data: FastAPI, Django REST Framework, Node.js, REST API design, JWT/OAuth2, Celery, WebSockets, PostgreSQL, MongoDB, Redis, BigQuery
Frontend: React.js, React Native (Expo), React Flow, Tailwind CSS, Material-UI, ApexCharts
AI, Cloud & Tooling: LLM orchestration (Gemini, Claude), RAG (Vertex AI Search), multi-agent architectures, GCP (Cloud Run, Vertex AI), AWS (EC2, S3, Cognito), Docker, Git, CI/CD

EDUCATION

Acharya Institute of Technology <i>B.E. Computer Science and Engineering — CGPA 8.4</i>	Bangalore, Karnataka <i>Dec 2021 – Jun 2025</i>
